

## **What is the difference between an academic degree and an academic title?**

[buy college essay](#)

A bit of terminology on the topic

So, the academic degree and title are the sequence of the teacher's qualifications. It's like in the navy: each officer has his own rank and, according to it, holds a certain position, receives wages with allowances, and so on. In the field of pedagogy, everything is the same, only titles and degrees are called somewhat differently.

Accordingly, each teacher strives for an extraordinary award of an academic degree or title, which will have a beneficial effect not only on his prospects for the future, but also on the family budget.

However, as in the navy, it is impossible to obtain such privileges for beautiful eyes, it is required not only to confirm your high qualifications, but also to perform the obligatory work in writing.

To understand in more detail what is what, it is worth finding out what academic degrees and titles are in the Russian Federation, and only then discuss the issues of privileges and incentives.

Types of academic titles

All academic titles, as well as the procedure for obtaining them, in the territory of the Russian Federation were approved back in 2002, and since then no amendments and adjustments have been made to the legislative document.

So what are the options?

Associate professor is the most common title in the university. Most often, lecturers are lecturers.

In addition, it can be researchers and other teachers of higher educational institutions, who were selected at the academic council of the faculty.

What does this mean?

A teacher can hold the position of an associate professor, but not correspond to this title. Such appointment responsibility is assumed by senior management based on the applicant's ability and competence.

For a teacher, this is a good start, because, holding the position of assistant professor, you can soon get this academic title.

How is this possible?

To improve your qualifications and to be awarded such an honorary title, you need:

Work as an associate professor for at least a year;

Be sure to have a scientific and pedagogical experience of at least 5 years;

Be the author or co-author of scientific papers or teaching aids.

A professor is a teacher of a high level of competence with in-depth knowledge in a particular field of science or art.

It is also possible to get this title, but this requires:

Teach in universities;

Have your own scientific achievements;

Be an employee of the state academies of sciences according to official attestation documents.

In general, you need to have not only pedagogical work experience, but also "head on shoulders" - to make discoveries, introduce know-how, publish reference books and didactic material, and also make rapid progress in the studied field of education.

So getting such an honorary title is not easy at all, but losing it is not difficult.

In conclusion, we can add that both academic titles "associate professor" or "professor" must be supported by an official document without fail.

If a teacher simply holds the position of an associate professor or professor, then he does not have the appropriate documentation; moreover, he can be displaced to another position in the employment of a certified professor or associate professor.

Corresponding member and full member of the Academy of Sciences are also known among the academic titles.

We will not discuss these titles in detail, since they are not so common in student life.
